Calculating Hessians

TOTAL POINTS 5

1. In this quiz, you will calculate the Hessian for some functions of 2 variables and functions of 3 variables.

1/1

For the function
$$f(x,y)=x^3y+x+2y$$
, calculate the Hessian matrix $H=egin{bmatrix}\partial_{x,x}f&\partial_{x,y}f\\\partial_{y,x}f&\partial_{y,y}f\end{bmatrix}$

$$egin{array}{ccc} H = egin{bmatrix} 0 & 3x^2 \ 3x^2 & 6xy \end{bmatrix}$$

$$\bigcirc \ \ H = \begin{bmatrix} 0 & -3x^2 \\ -3x^2 & 6xy \end{bmatrix}$$

$$\bigcirc \ \ H = \begin{bmatrix} 6xy & -3x^2 \\ -3x^2 & 0 \end{bmatrix}$$

✓ Correct

Well done!

1/1p

2. For the function $f(x,y)=e^x cos(y)$, calculate the Hessian matrix.

$$OH = \begin{bmatrix} -e^x cos(y) & e^x sin(y) \\ -e^x sin(y) & -e^x cos(y) \end{bmatrix}$$

$$\bigcirc \ \ H = \begin{bmatrix} -e^x cos(y) & -e^x sin(y) \\ -e^x sin(y) & e^x cos(y) \end{bmatrix}$$

$$\bigcirc H = \begin{bmatrix} -e^x cos(y) & -e^x sin(y) \\ e^x sin(y) & -e^x cos(y) \end{bmatrix}$$

✓ Correct

Well done!

B

3. For the function $f(x,y)=rac{x^2}{2}+xy+rac{y^2}{2}$, calculate the Hessian matrix.

Notice something interesting when you calculate $\frac{1}{2}[x,y]H\begin{bmatrix}x\\y\end{bmatrix}!$

$$\bigcirc \ \ H = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$O_H = \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$$

$$\bigcirc H = \begin{bmatrix} 1 & 0 \\ -1 & 1 \end{bmatrix}$$

✓ Correct

Well done! Not unlike a previous question with the Jacobian of linear functions, the Hessian can

$$H = \begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix}$$

$$O H = \begin{bmatrix} 1 & 0 \\ -1 & 1 \end{bmatrix}$$

✓ Correct

Well done! Not unlike a previous question with the Jacobian of linear functions, the Hessian can be used to succinctly write a quadratic equation in multiple variables.

4. For the function $f(x,y,z) = x^2 e^{-y} cos(z)$, calculate the Hessian matrix $H = \begin{bmatrix} \partial_{x,x} f & \partial_{x,y} f & \partial_{x,z} f \\ \partial_{y,x} f & \partial_{y,y} f & \partial_{y,z} f \\ \partial_{z,x} f & \partial_{z,y} f & \partial_{z,z} f \end{bmatrix}$

1/1 point

$$\Theta \quad H = \begin{bmatrix} 2e^{-y}cos(z) & -2xe^{-y}cos(z) & -2xe^{-\dot{y}}sin(z) \\ -2xe^{-y}cos(z) & x^2e^{-y}cos(z) & x^2e^{-y}sin(z) \\ -2xe^{-y}sin(z) & x^2e^{-y}sin(z) & -x^2e^{-y}cos(z) \end{bmatrix}$$

$$\bigcap_{H = \begin{bmatrix} 2e^{-y}cos(z) & 2xe^{-y}cos(z) & 2xe^{-y}sin(z) \\ 2xe^{-y}cos(z) & x^2e^{-y}cos(z) & x^2e^{-y}sin(z) \\ 2xe^{-y}sin(z) & x^2e^{-y}sin(z) & x^2e^{-y}cos(z) \end{bmatrix}}$$

$$egin{aligned} egin{aligned} egin{aligned} & 2xe^{-y}cos(z) & x^2e^{-y}cos(z) & 2xe^{-y}sin(z) \ 2xe^{-y}cos(z) & x^2e^{-y}cos(z) & x^2xe^{-y}sin(z) \ 2xe^{-y}sin(z) & 2xe^{-y}cos(z) \end{aligned} \end{bmatrix}$$

$$egin{aligned} igg(& = egin{aligned} 2xe^{-y}cos(z) & -2e^{-y}cos(z) & -2e^{-y}sin(z) \ -2e^{-y}cos(z) & x^2e^{-y}cos(z) & x^2e^{-y}sin(z) \ -2x^2e^{-y}sin(z) & x^2e^{-y}sin(z) & -2xe^{-y}cos(z) \end{aligned}$$

✓ Correct

Well done!

5. For the function $f(x,y,z)=xe^y+y^2cos(z)$, calculate the Hessian matrix.

$$egin{aligned} egin{aligned} igoplus & E^y & 0 \ e^y & xe^y + 2sin(z) & 2ycos(z) \ 0 & 2ycos(z) & y^2sin(z) \ \end{pmatrix} \end{aligned}$$

$$egin{aligned} igcap & H = egin{bmatrix} 0 & e^y & 0 \ e^y & xe^y + 2cos(z) & 2ysin(z) \ 0 & 2ysin(z) & y^2cos(z) \end{bmatrix} \end{aligned}$$

$$egin{aligned} igcap_{H} & = egin{bmatrix} 0 & e^y & 0 \ e^y & xe^y + 2sin(z) & -2ycos(z) \ 0 & -2ycos(z) & -y^2sin(z) \end{bmatrix} \end{aligned}$$

$$H = egin{bmatrix} 0 & e^y & 0 \ e^y & xe^y + 2cos(z) & -2ysin(z) \ 0 & -2ysin(z) & -y^2cos(z) \end{bmatrix}$$

✓ Correct

Well done!
